The Numbering System for Golden Harvest Corn Hybrids

In order to streamline and simplify the seed selection process, Golden Harvest® uses a single, uniform hybrid numbering system.

The numbering system simplifies the seed selection process by providing the transparent identification of relative maturities and trait stacks in the hybrid. In addition:

- The numbering system clearly identifies the hybrid’s relative maturity, genetics and traits.
- Clearer identification makes it easier for farmers and Golden Harvest Seed Advisors to pick the best hybrids for their fields.

**HYBRIDS**

**KEY TO UNDERSTANDING HYBRID NAMES AND DESCRIPTIONS**

This two-digit number is the same as the last two digits of relative maturity.

The next letter and two-digit number are designated to uniquely identify each genetic family.

**HYBRID SERIES:**

All hybrids within this series were developed from the same base genetics.

**EXAMPLE:**

**G09Y24 Artesian**

**RM:** 109

**EXCITING GENETICS WITH AGRISURE ARTESIAN TECHNOLOGY**

- Maximizes yield when it rains; increases yield when it doesn’t
- Population flexibility across all environments
- Top-end yield potential with stability when conditions are tough

**Trait versions available in this hybrid series.**

These traits and technologies are available in a variety of high-performing trait stacks. To convey the characteristics and advantages of the various Agrisure trait stacks, there is a consistent, straightforward naming system to indicate the technologies present in each trait stack.

Golden Harvest corn offers multiple integrated, single-bag refuge options. A number of Agrisure, Agrisure Viptera and Agrisure Duracade trait stacks are available as E-Z Refuge products, offering dual modes of action on key pests along with farmer convenience and stewardship compliance.
